

CPP-2,CPA-2:

- If rollers in the rollerbase 07067 turn hard it is necessary to widen the holes in the rollerbase to a larger diameter. This sluggish movement of the rollers can be caused by expansion of the plastic from soaking in water. The friction caused by rollers turning hard can overburden the rotation motor.(Incorporated into production since Feb. 1983).
- Units built from May 1983 on have a heavier transformer for increased current output to the rotation motor.(CPA-2 AR 2260, GB 1010,110V-unit 10030, CPP-2 AR 1155,GB 10057,110V-unit 10078).
- In order to obtain VDE approval we modified the P.C. boards. (For detailed info: see specific section in service manual addendments.)
- The 'bearing' (center hole) in the pump housing for the pump impeller must be widened from 4,1mm to 4,5mm,to allow free rotation of the pump even when water is dirty.(This is incorporated in units since serial Nr.'s CPA-2 AR 2416,GB 10121; CPP-2 AR 1175,GB 10072).
- The red rotation trough has been changed underneath the rotation magnet to prevent water running over even when maximum water height is used.(Incorporated since serial Nr.'s CPA-2 2561,GB 10121;CPP-2 AR 1251,GB 10072).

## Appendix to service file CPP-2

### Transformer P.C.boards:

The transformer P.C.boards are all assembled according to the new layout (8216) known as the AT-1 design. This version does not incorporate the 100 Ohm 1/4 Watt resistor (40 018) which was soldered into the trace leading to the base of transistor tip 140/tip 3055. This resistor is now incorporated into a newly designed switch board (see next section for details). When using a combination of the new transformer board and the old switch board, it is necessary to ADD the Resistor as before (the same relates to all international design units).

### Switching P.C. Board: (24025)

This newly designed switching board is totally compatible with the old version. For more information see the new schematic diagram (new boards have 8243 imprinted on solder side) (from serial Nr.'S AR 1230,GB 10 072).

### CPP-2 display P.C. board: (95068)

The display P.C. board has been redesigned utilizing stronger switches and incorporating a dimmer circuit, for the LED displays. The new design is totally compatible with the old design and can be used interchangeably (the redesign is effective since 22.04.83 and starts with serial Nr. AR 1079,10057,GB 10 120-USA).

In case service or replacement is necessary the following items should be checked and/or completed:

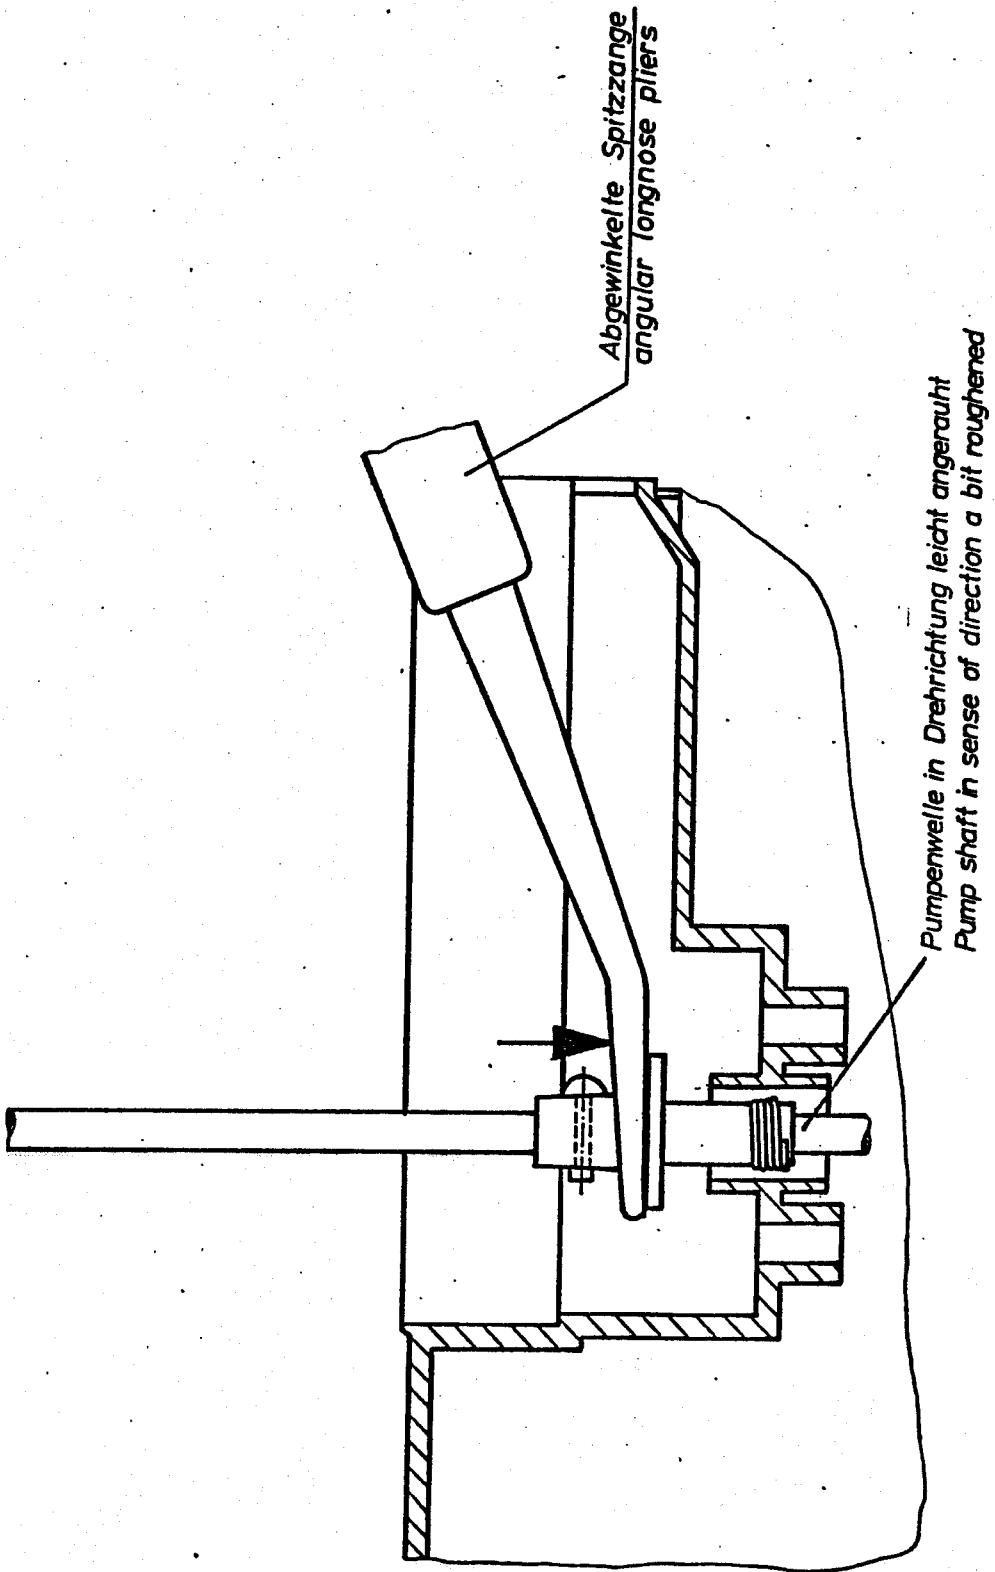

1. The three drilled holes for the temperature switches should be widened to 11 mm diameter.
2. The three numbered knobs which where previously used have to be replaced by one piece 07 114, and two pieces 07 115.
3. The display should no longer be 'floating' but should be firmly screwed on.
4. To improve reliability trimmer P41 should be changed from a dale part to an equivalent spectrol part. The spectrol part has been the cause of many problems.
5. The temperature sensor should be covered with a 'heat-shrink' tubing to protect from corrosion.

## Addition to Service manual of CPP-2/VDE-Version

The read out PC-board CPP-2 24026/8216 is different to the existing version by the new BCD-switches (same function) and an automatic change of the luminousness indication in dependence on the room light.  
This results changed impulse diagrams.

The 3 branches A-D, B-E, C-F are identical and are explained by use of A - D. Please observe that between identical signals of the branches exists a phase displacement.

Instructions for final adjustment indicator P.C. board CPP 2

PGH / bu 27.2.1981

a) subject: power P.C. board and indicator P.C. board  
( provide tension restainer a knot in a wire bad )

b) supplementary equipment: 1) container with stirred water at ambient temp.

( ideal 19°C - 21°C, for temperatures outside  
that range see correction table ① )

2) stirred water bath with constant temp.  
 $40,7^{\circ}\text{C} \pm 0,05$

3) power supply 5 V DC a piece of power cord  
a plug at one end and special connector for

P.C. board at the other end.

4) tool for potentiometer adjustments, nail polish  
( cosmetic )

5) 2 thermometers for water temp. checks.

c) procedure:

1) connect P.C. board  
set amplification to center pos. ( P 40 )

2) put temp. sensor into water bath ( 20°C )

3) adjust pot ( P 41 ) to bath ① temp.  
( 19 - 21 °C or see correction table one )

4) put temp. sensor into bath ② ( 40,7°C ) 38,3

5) adjust pot. ( P 40 ) until read out shows value according  
to corrections table 2.  
after that adjust pot ( P 41 ) until read out shows 40 °C.

6) put temp. sensor into bath ① again, read out must show temp. used  
under paragraph 3  $\pm 1/10$   
if read out fails to show proper temp. repeat procedures 3 to 6 again.

7) after adjustments have been completed secure pot. pos. with nail polish.

attention:

Give temp. sensor always enough time to adjust to bath temp.

①	correction table bath 1 temp. others than 20 °C	bath temperatur °C	correction value °C
		17	- 18,9 + 1/10
		19	- 21,5 -
		21,6	- 24 - 1/10

27.8.84

Betr.: CPP 2 / CPA 2 - Pumpenmontage

Ab 27.7.84 wurden einige Verbesserungen bei der Pumpenmontage durchgeführt.

- 1) Montage der Pumpenwelle auf der Motorwelle ohne Vaseline
  - 2) Aufrauhen der Motowelle mit Schmirgelleinen ( Papier, Stärke 100 ) bei laufendem Pumpenmotor.
- Ursache für die Änderung war, daß bei einigen Geräten die einwandfrei montierte Pumpenwelle, trotz festem Sitz, durch Vibrationen herunterrutschte und dadurch Geräusche erzeugte.
- 3) Der Führungsstift der Pumpenwelle muß zwischen 3 und 6 mm aus dem Pumpengehäuse ragen.

Re.: CPP 2/CPA-2 Pump mounting

From 27.07.1984 on we have made some improvements at the pump mounting:

- 1.) Mounting of the pump shaft on the motor shaft without Vaseline-grease.
- 2.) Rough up the motor shaft with abrasive cloth (paper, size 100) at running motor.

Reason for the change was that at some of the devices the correct mounted and fixed pump shaft jumped off by vibrations and produced noises.

- 3.) The guide pin of the pump shaft has to project over the pump housing for 3 - 6 mm.

## pump CPA 2 / CPP 2

- 1) Dismantling : - remove housing of pump
- remove pump shaft with long nose pliers ( angular pliers )  
( see picture number 1 )
  - unscrew and remove pump motor
- 2) Assembling:
- position felt disc unto motor shaft and lubricate with resin free oil ( Tellus 68 )
  - \* - Rough the motor shaft a bit in sense of direction ( emery )
  - please extend the lower boring of the pump housing with a drill of 4,5 mm Ø .
  - attach pumpschaft with long nose pliers ( see picture number 2 ) proper shaft position is importend
  - check pump shaft for wobble and readjust if needed.
  - attach pump housing, make sure it fits properly.

## attention:

- pump wheel must run free and not touch any part of the housing.
- \* - Min. distance between pump fan and the housing must be 3mm

technical data: motor V = 220 VAC ( GB: V= 240 VCA; USA: V= 120 VCA )  
P = 10 W

R.P.M. without load : = 2750 U /min.  
over all lenght of pumpshaft : 222,5 - 0,5 mm

## special note:

## concerning:

CPA 2 up to AD-No. 2597 ( GB: AD 1200 )  
CPP 2 up to AD-No. 1724 ( GB: AD 1070 )

equipment with above serial numbers has special pump motors.

In case of replacement use parts no. 95 059

to 240 V motor = 32 015 + 34 029

to 120 V motor = 32 008 + 34 029

special instructions: - new felt disc 18x4x1 mm for motor no. 95 059 / 34 029

- new mounting screws: M4x18 Ms  
replacement kit part no. 95 099
- resistor R 1 ( 560 Ohm ) of transformer P.C. board must be passed-by
- replace pumpsbaft with part no. 95 081

## CPA 2 / CPP 2

Adjustments for motor ( power p.c. board )  
=====**a) adjustments of servo-mechanism ( P 21 )**

- 1) set motor speed control ( P 23 ) to min. pos.
- 2) set trimmer P 21 to min.pos.
- 3) turn trimmer P 21 clockwise untill motor reaches max.speed
- 4) turn P 21 counter clockwise untill motor reaches min.speed
- 5) turn P 21 c.c.w. additional 15° .

**b) adjustments of variable voltage control at P 22**

- 1) set motor polarity-switching -arm to outside pos., adjust motor control ( P 23 ) untill voltage at pin 6 ( power transistor OP/base out put ) of IC 22 reads 20 V.D.C. ( approx.control knob pos "P" )
- 2) set motor polarity-switching-arm to inside pos.
- 3) turn trimmer ( P 22 ) c.c.w. to stop, zhan c.w. untill voltage reaches 5 to 7 V during polarity change offmotor.

**Instrument requirements :**

oscilloscop or Analogvoltmeter  
change rate of voltage V / t : 15 V / sec.

**Motortest data : motor ( 32 006 ) power supply 6 V.D.C. starting current max. 300 mA**

**Rotation rate : min. P 23 pos. = <25 R.P.M.  
max. P 23 pos. = >80 R.P.M-**

**b) variable voltage control must not be adjust at Nr. AR 1230**

Nr. 10 072 GB  
Nr. 10 346 USA
